

INSTALLATION INSTRUCTION

Compliance with EMC directive is always necessary for customer's application. We expect adding a capacitor can help to improve EMC suppression of system; but if customer's system already complies with EMC directive, it's not necessary to add capacitor into the system.

We are offering fan with capacitor within each carton, concerning the usage of this capacitor, if needed, it shall be installed in system power supply for fan at connector or wire. The additional capacitor shipped together with fan at no extra charge.
